# Persona's

## 📜 Information

Anonymous

Age: 19

Location: Zoom meeting

Time: 10 minutes

Location of the interview: zoom

## 😃 Product Requirements

**Features**

1. I would like to have a streaming service that allows me to watch the latest top hits with high definition graphics. I also want to be able to find other movies that I would be interested in. As like other apps,

an appealing and simple to use UI is also desired.

## Filters

1. A recommendation filter that looks at my latest watches and determines fit movies to watch next. Other filters such as genre and most popular would be nice.

## Additional information

1. A basic synopsis of the film, overall rating by other watches, length of the movie.

## Main Page Requirements

1. Two separate lists of films, one for personal recommendations and the other for latest hits in a certain genre. I also wanna see something that displays my unfinished watches/next episode as the first thing I see when I open said app.

## Accessible Features

1. Preferably a darker theme since movies are usually watched in the dark. I don't want blind myself. There can be a setting that allows you to automatically turn to dark mode in dark settings or something that allows me to switch to a lighter theme.

## Frustration

1. ADS, crappy quality, low frames, lagginess
